

RESOURCES: HIRE AND PLANNING TIPS

- . Because we have many years experience delivering and placing of our cabins we will call you to discuss your particular circumstances and wishes.
 - . However, to ensure a swift and efficient delivery process check that access to your site/property is clear and remove any overhanging branches, parked vehicles etc prior to our delivery personnel arriving.
 - . Look at where to site your cabin where it will make the most of the sun.
 - . Consider how wet your proposed cabin site gets in Winter to ensure you have the clearest and cleanest access to your cabin.
 - . When deciding on your cabin site, check how close you will be to the power source to enable you to plug in your cabin power lead. We can provide you with extra certified power leads if you require them. Just make contact with us.
 - . Don't forget to look UP and check the height of your house eaves to the ground for the safe delivery of your cabin if your access means the delivery person is required to pass close by your house, garage or another building on your property.
- Remember on this website are the details for the amount of room MIZIN requires to safely deliver your cabin and if you have any concerns contact us prior to your delivery date to ensure there is plenty of time for all of us to organize an efficient and easy delivery.
- . Another reminder to look UP: check to see if there are any power or communication lines/wires that hang low which might interfere with a smooth cabin delivery.
 - . Don't forget we do lift our cabins over buildings, swimming pools, fences etc. to site them on your property where you want them to sit.

HAPPY HIRING 😊
